EDUCATION

Arizona State University

Course: Master of Science

Major: Computer Science

Tempe, Arizona, USA

Aug 2023 - May 2025

CGPA: 3.8/4

Relevant Coursework: Advanced Computer Networks, Combinatorial Algorithms and their Intractability, Digital Video Processing, Statistical Machine Learning, Data Mining, Knowledge Representation and Reasoning, Information Assurance and Security, Software Security, Distributed Database Systems, Cloud Computing.

PES University

Course: Bachelor of Technology

Major: Computer Science and Engineering

Bangalore, Karnataka, India

Aug 2019- Jun 2023

CGPA: 8.32/10

Relevant Coursework: Python Application Programming, Object-oriented programming with JAVA, Data Structures and its Application, Design and Analysis of Algorithms, Machine Learning, Artificial Intelligence, Data Analytics, Big Data, Cloud Computing, Database Management System, Software Testing, Data Science, Engineering Mathematics, Operating Systems, Distributed Systems, Web Technologies, Linear Algebra.

PROFESSIONAL EXPERIENCE'S

Juniper Networks

Software Engineer

May – Aug 2024

Sunnyvale, California, USA

- Created a full stack web app with React, Django, and PostgreSQL that cut manual errors by 50% and enhanced deployment efficiency, benefiting 500+ Juniper Networks employees with real-time updates and insights.
- Led automation of cloud application deployments using Python scripts integrated with Jenkins, cutting deployment time by 75% and ensuring faster, more reliable delivery.
- Streamlined the release process for cross-functional teams through automation, enhancing collaboration and reducing delays by 60%.
- Eliminated multiple Jira ticket iterations by automating data validation and collection, reducing operational complexity.
- Improved productivity by centralizing the development process and offering real-time visibility into deployment progress, increasing efficiency by 30%.

Arizona State University

Software Development Engineer

Feb – May 2024

Tempe, Arizona, USA

- Designed and developed a scenario-based mobile game application using Flutter, now utilized by 90% of sustainability course students across five universities and the United States Department of Agriculture (USDA).
- Engineered a user authentication system that incorporated biometric verification and multi-factor authentication (MFA) for enhanced security, while streamlining the onboarding process for over 10,000 students.
- Optimized the database performance by implementing a Python multiprocessing script, improving data retrieval speed by 10x and visualizing user engagement data in PowerBI for actionable insights.

Goldman Sachs

Software Engineer

Jan – Jun 2023

Bangalore, Karnataka, India

- Developed a Python app for efficient data extraction, cutting processing time by 80% and improving facility utilization tracking.
- Designed an automated cash flow aggregation system, integrating real-time transaction tracking and ensuring seamless reconciliation, which increased throughput by 10x, eliminating manual intervention.
- Implemented parallel processing scripts in Python, accelerating database queries by 10x and enhancing PowerBI insights.

SM Innovations (Indian Institute of Science)

Software Engineer

Jun - Jul 2022

Bangalore, Karnataka, India

- Developed user-friendly applications for CytoCube, including an automated microscopy unit for capturing images from peripheral blood smears, wet mounts, and microfluidic devices to assist underprivileged communities in Africa in detecting diseases like pneumonia.
- Built an AI-enhanced diagnostic framework, leveraging deep learning techniques to accelerate disease detection by 10x, improving medical image analysis efficiency for faster clinical decision-making.

TECHNICAL SKILLS

- Programming Languages:** Python, Java, C, JavaScript, C++, SQL.
- Frameworks:** Django, React, Angular, Flutter, Spring Boot, Spring Framework.
- Cloud Platforms:** AWS, GCP, Azure.
- Databases:** PostgreSQL, MongoDB, MySQL, NoSQL, Snowflake, Redis, Cassandra.
- Tools:** Docker, Kubernetes, Linux/UNIX, Jenkins, Alteryx, Git, GitHub Actions, Windows, IOS, REST API.
- Development Environments:** Frontend (React.js, HTML, CSS), Backend (Node.js, Django), Web Development.
- Big Data & Analytics:** Spark, Kafka, Hadoop, Data Lake, Snowflake, Power BI, Tableau, Alteryx.
- Testing & Debugging:** JUnit, PyTest, Selenium, Postman, A/B Testing.
- Methodologies:** Agile, Scrum, DevOps, SDLC.

PROJECTS

Bain & Company

Customer Acquisition Automation using Python and GenAI

Dec 2024 - Present

- Built Python-based APIs that enhanced customer onboarding efficiency by 4x through automation.
- Leveraged ChatGPT 3.5 model to classify customer profiles based on data, reducing manual workload by 5x and improving accuracy.
- Integrated automated data ingestion into Adverity and Snowflake, reducing errors and saving 80% manual effort.
